

MARKETING CAPSTONE PROJECT

BrewBound Coffee

Google Ads Search Campaign Strategy & Final Findings Report

Prepared For: Digital Marketing Portfolio / Course Assessment

Brand Focus: Premium DTC Coffee Subscription

Date: June 2026

Status: Complete Campaign Framework by **Ashvini Ahire**

1. Executive Summary & Strategic Overview

This comprehensive report synthesizes the strategic planning, technical configuration, and foundational learning framework developed for the official rollout of BrewBound Coffee (BrewBoundCoffee.com). Moving away from broad market segments, the brand is explicitly positioned as a premium direct-to-consumer (DTC) specialty coffee subscription service. The core business model relies on delivering freshly roasted, ethically sourced, small-batch coffee beans directly to the customer's doorstep on a friction-free recurring schedule.

Core Campaign Objective

The overarching mandate of this initiative is to acquire active, high-lifetime-value monthly subscribers. A secondary emphasis is placed on capturing top-of-funnel email leads via newsletter sign-ups to fuel down-funnel email marketing nurturing sequences.

Campaign Parameters & Budget Allocation

To ensure strict alignment with immediate e-commerce targets, the initial launch operates within a targeted, disciplined budget framework utilizing automated Google Ads bidding logic:

\$40.00

DAILY TARGET BUDGET

Maximize Conversions

BIDDING STRATEGY

Audience Segmentation & Targeting Profile

- **Demographics:** Target core is adults aged 22–50, skewing heavily toward affluent urban professionals and remote technology/corporate workers who invest heavily in their home office environments.
- **Psychographics & Interests:** Third-wave coffee enthusiasts, advocates for sustainable living and ethical supply chains, home-brewing gadget hobbyists (Pour-over, Aeropress, Espresso), and productivity-focused lifestyle buyers.
- **Geographic Scope:** Nationwide distribution (United States) with heavily weighted bid signals pointing toward major urban coffee epicenters including Seattle, WA; Portland, OR; and New York City, NY.

2. Keyword Search Architecture

A premium brand configuration requires precise intent mapping. By bypassing overly broad search queries that drain marketing spend without generating recurring volume, the selection strategy leans specifically into transactional search intent. Long-tail terminology isolates users who have already surpassed the informational awareness phase and are actively looking to buy or subscribe.

Keyword	Match Type	User Search Intent
"Best coffee subscription"	Phrase Match	Comparison & Shopping: Captures prospects researching options with active intent to join a plan.
"Freshly roasted coffee beans"	Phrase Match	Quality-Driven Search: Filters for buyers seeking premium freshness over cheap commercial alternatives.
[Organic espresso beans]	Exact Match	Specific Product Search: Maximizes relevance for niche, organic-focused espresso home baristas.
[Whole bean coffee delivery]	Exact Match	Explicit Fulfillment Search: Isolates high-intent consumers specifically demanding delivery models.
[Single origin coffee box]	Exact Match	High-End Enthusiast: Targets discerning buyers willing to pay a premium for flavor diversity.

Keyword Match Type Justification

By utilizing a balanced mix of Phrase Match and Exact Match parameters, the campaign establishes a protective perimeter against irrelevant searches. Phrase Match grants Google's algorithms appropriate flexibility to capture query variations containing our core phrases, while Exact Match locks down ultra-high-converting terms to keep Cost-Per-Click (CPC) efficient.

3. Creative Copywriting & Responsive Search Ad Assets

In alignment with Google Ads Expert Mode guidelines, a highly modular layout was deployed for the Responsive Search Ads (RSA). This structure empowers Google's automated machine-learning engine to dynamically test and serve the most effective combinations of copy based on the searcher's real-time context.

Responsive Search Ad Structure

Configured Headlines (Dynamic Testing Pool)

- Headline 1: Freshly Roasted Coffee Beans
- Headline 2: BrewBound Coffee Subscription
- Headline 3: Get 20% Off Your First Box
- Headline 4: Ethically Sourced & Delivered

Configured Descriptions

- Description 1: Experience the world's finest small-batch coffee delivered to your door. Freshness guaranteed.
- Description 2: Join 5,000+ coffee lovers. Choose your roast, set your schedule, and never run out again.

Live Ad Layout Example Mockup

Below is a visual simulation of how Google Ads dynamically synthesizes these operational text assets into a customer-facing SERP unit:

Freshly Roasted Coffee Beans | BrewBound Coffee Subscription

Experience the world's finest small-batch coffee delivered to your door. Freshness guaranteed. Join 5,000+ coffee lovers. Choose your roast, set your schedule, and never run out again.

Extension Strategy Execution

To maximize screen real estate and increase Click-Through Rates (CTR), the campaign design incorporates functional Sitelink Extensions. These steer prospects cleanly away from just the homepage to high-converting alternative pages, such as 'Our Roasts' (highlighting bean varieties) and 'Gift Subscriptions' (capturing seasonal and corporate holiday buyers).

4. Visual Identity & Creative Display Assets

To lay the groundwork for cross-channel extension (including Performance Max expansions and Google Display Network remarketing), the verified image assets have been successfully linked and rendered into our project repository. These assets embody the high-end, premium look necessary for our targeted display demographics.

5. Operational Analysis, Challenges & Strategic Findings

Building this campaign yielded critical insights into budget management, structural optimization, and the realities of entering highly competitive digital e-commerce markets.

Strategic Selection of Campaign Objectives

Selecting a pure Sales Objective directly matches the DTC subscription engine behind BrewBound Coffee. Because our business health rests entirely on the volume of active, predictable, monthly recurring subscribers, performance metrics cannot rely solely on vanity clicks. Success is defined strictly by confirmed subscription conversions and the acquisition cost associated with building our long-term customer baseline.

Market Challenges & Broad Keyword Pitfalls

The premium coffee sector presents substantial competitive friction from venture-backed and established heritage brands. Preliminary keyword research quickly revealed that broad-match keywords such as 'Coffee' or 'Coffee Beans' are prohibitively expensive and highly inefficient. They capture low-intent informational searches (e.g., historical inquiries, local coffee shop locations, recipes), which drives up programmatic costs while diluting conversion rates.

Strategic Solution: This risk was neutralized by transitioning entirely to niche Long-Tail Keywords (e.g., 'Single origin coffee subscription', 'Whole bean coffee delivery'). This channels budget exclusively to a pre-filtered consumer demographic that displays a high willingness to pay for premium beans.

The Critical Role of Quality Score Optimization

A fundamental realization during this campaign design was the direct relationship between ad relevance and Google's Quality Score algorithm. By systematically embedding specific keywords (like 'Organic' and 'Freshly Roasted') directly into our Responsive Search Ad text strings, we ensure absolute alignment with the user's explicit query.

This high level of alignment optimizes the Expected Click-Through Rate and Landing Page Relevance. Consequently, a superior Quality Score lets BrewBound outbid larger competitors for high-tier ad placements while lowering our actual Cost-Per-Click (CPC), maximizing efficiency for our \$40/day budget.

Execution Summary for Google Ads Manager Integration

1. System Authentication: Navigate to the professional portal at ads.google.com.
2. Interface Elevation: Actively toggle the view out of standard mode by choosing 'Switch to Expert Mode' to open advanced structural control over bidding and network distribution.
3. Draft Setup: Initialize an unguided campaign shell mapped specifically to the Search Network.
4. Targeting Refinement: Establish geographic restrictions to the United States region with strict English language filters, focusing core bid weightings on key target metropolitan cities.
5. Structural Upload: Input the mapped keyword database using exact phrase configuration wrappers (" " and []).

6. Asset Integration: Input the optimized Headlines, Descriptions, and Sitelink Extensions into the RSA builder interface.
7. Validation: Progress to the final Campaign Review Summary stage to screenshot and verify the comprehensive settings blueprint prior to safe active deployment.
